Professional Summary

Computer Science and Data Science student with hands-on experience in **Data Science, Machine Learning, Backend Development, Computer Vision, and Deployment Automation**. Currently working as a **Data Science Intern at Unified Mentor Pvt. Ltd.** Experienced in building AI-based systems, FastAPI backends, Dockerized deployments, Git webhook automation, and data-driven applications. Seeking opportunities in **Data Science, AI/ML, Backend Engineering, or Software Development**.

Experience

Unified Mentor Pvt. Ltd. – Data Science Intern *Aug 2026 – Present*
Remote

- Working on data science projects involving data preprocessing, analysis, machine learning, and model evaluation.
- Applying Python and data science techniques to transform raw datasets into meaningful insights and predictive solutions.
- Collaborating on practical projects and following structured development and documentation practices.

Education

SRM Institute of Science and Technology *Expected 2027*
B.Tech in Computer Science and Engineering – Data Science CGPA: 8.1/10

MGM Higher Secondary School *2023*
Higher Secondary Certificate Score: 74%

Technical Skills

Programming: Python, C++, C, Java, SQL, JavaScript

Data Science & AI/ML: Machine Learning, Deep Learning, NLP, CNN, Data Analysis, Statistical Analysis, Computer Vision, TensorFlow, Scikit-learn

Backend & Frameworks: FastAPI, Node.js, Express.js, Flask, React.js, REST APIs

Databases: MongoDB, MySQL, Firebase Firestore, Firebase Realtime Database

DevOps & Tools: Docker, Git, GitHub, AWS, Postman, Linux, Vite

Projects

Backend Deployer – Automated Application Deployment Platform GitHub

- Built a deployment automation platform using **FastAPI and Docker** to deploy and manage web applications through containerized environments.
- Implemented **Git webhook integration** to automatically detect code pushes and trigger application updates without manual redeployment.
- Enabled developers to monitor **live deployment and application logs** directly from the platform for easier debugging and monitoring.
- Implemented remote code update capabilities and automated deployment workflows for deployed applications.
- Designed mechanisms for handling application traffic and maintaining deployed services during updates.

AquaSentinel – AI-Based Marine Plastic Detection System *Research Project*

- Developing an AI-based system for detecting **marine plastic pollution** from satellite and live drone imagery.
- Designed an image-processing and **CNN-based classification pipeline** to identify plastic and non-plastic objects from images.
- Implemented preprocessing techniques including image resizing, standardization, and dataset preparation for model training.
- Designed a backend pipeline to process prediction results and store detection data using **MongoDB**.
- Working toward an integrated system combining AI prediction, backend APIs, database storage, and visualization for marine pollution monitoring.

Credit Card Fraud Detection using GANs *Machine Learning Project*

- Developed a GAN-based approach for detecting fraudulent credit card transactions in highly imbalanced datasets.
- Generated synthetic fraud samples to address class imbalance and improve model training.

- Applied data preprocessing, feature engineering, model training, and evaluation techniques to analyze fraud detection performance.

PotheriMart – P2P Utility Marketplace GitHub

- Developed a peer-to-peer marketplace platform for listing and exchanging utility products within a local community.
- Implemented user workflows for product listings, transactions, and delivery coordination.
- Designed a marketplace-style web interface focused on simple and accessible user interactions.

Certifications

- NPTEL Certification
- C Programming Course Completion
- Java Programming Course Completion
